

SandBoxer Product Flow v1

Mission

SandBoxer transforms vague ideas into executable startup blueprints.

We are not helping users write code.

We are helping users discover what should be built.

Every interaction inside SandBoxer should move the user from uncertainty toward clarity.

Core User Journey

A user arrives with an idea.

A user leaves with a blueprint.

The journey is:

Idea → Vision → User → Problem → MVP → Constitution → Blueprint → Export

Stage 0 — Landing

User State

The user has an idea.

The user does not know where to start.

Screen

A blank notebook page.

Centered question:

"What are you trying to create?"

Large handwritten-style input box.

Examples:

"I want to build..."

"What if..."

"Imagine a product that..."

Goal

Reduce friction.

Get the first idea onto paper.

Stage 1 — Idea Capture

User Input

Example:

"I want to help creators launch digital products."

AI Objective

Do NOT generate features.

Do NOT generate code.

Extract:

- Motivation
- Audience
- Desired Outcome

Output

Idea Card

Example:

Idea: Help creators launch digital products.

Potential Audience: Content creators.

Desired Outcome: Generate first online revenue.

Stage 2 — Vision Discovery

Goal

Discover why the product should exist.

AI Questions

Why does this matter?

Who benefits most?

What future are we trying to create?

What changes if this succeeds?

Output

Vision Card

Example:

Enable creators to launch their first digital product within seven days.

Stage 3 — User Discovery

Goal

Identify the ideal user.

AI Tasks

Challenge broad audiences.

Force specificity.

Example

Bad:

Everyone.

Good:

Independent creators with fewer than 10,000 followers.

Output

User Persona Card

Contains:

- User Type
 - Goals
 - Frustrations
 - Existing Alternatives
-

Stage 4 — Problem Discovery

Goal

Identify the problem.

Not the solution.

AI Tasks

Keep asking:

What is the user's real pain?

What happens if they do nothing?

Why is this painful?

Output

Problem Card

Contains:

- Core Problem
 - Frequency
 - Severity
 - Existing Workarounds
-

Stage 5 — MVP Discovery

Goal

Remove unnecessary complexity.

AI Rule

If the product launched tomorrow:

What single feature must survive?

Example

Bad MVP:

Dashboard Analytics Community Marketplace CRM

Good MVP:

Generate a launch roadmap.

Output

MVP Card

Contains:

- Core Promise
- Core Feature
- Time-to-Value

Stage 6 — Product Constitution

Goal

Create anti-drift protection.

Description

Every project generates a constitution.

The constitution becomes permanent.

All future discussions reference it.

Structure

Vision

Core Principles

Success Metrics

Constraints

Forbidden Features

Example

Vision: Help creators launch their first product.

Principles: Move fast. Stay simple. Avoid complexity.

Forbidden: Social network. Enterprise features. Team permissions.

Success Metric: First sale completed.

Stage 7 — Blueprint Generation

Goal

Transform thinking into execution.

Output

Startup Blueprint

Contains:

Vision

Audience

Problems

MVP

Feature Priorities

Execution Roadmap

Risks

Validation Strategy

Stage 8 — AI Review

Goal

Act as a product coach.

AI Challenges

Why will this fail?

What assumptions are untested?

What should be removed?

What is overbuilt?

Output

Founder Review

Strengths

Weaknesses

Risks

Recommendations

Stage 9 — Export

Goal

Move from planning to building.

Export Options

Markdown

PRD

AI Studio Prompt

Lovable Prompt

Bolt Prompt

Cursor Project Context

JSON Blueprint

Workspace Layout

The workspace is not a chat.

The workspace is a product map.

Layout:

Left Sidebar Project Navigation

Center Canvas Product Thinking Space

Right Sidebar Product Constitution

The Constitution remains visible at all times.

AI Behavior Rules

The AI is not an assistant.

The AI is a product strategist.

The AI should:

Challenge assumptions.

Reduce complexity.

Prevent drift.

Ask clarifying questions.

Force prioritization.

The AI should never:

Generate features too early.

Encourage scope creep.

Agree automatically.

Optimize for complexity.

Anti-Drift Protocol

Whenever a new feature is proposed:

Step 1: Compare against Vision.

Step 2: Compare against Principles.

Step 3: Compare against Success Metric.

Step 4: Check Forbidden Features.

Step 5: Return one of:

Aligned

Partially Aligned

Misaligned

Every decision must justify itself.

Success Definition

A successful SandBoxer session ends with:

The user understanding:

Who they serve.

What problem they solve.

What must be built.

What should not be built.

How to begin.

The outcome is not code.

The outcome is clarity.

Idea → Vision → Blueprint → Reality
